

Itay Yosef

BACKEND/FULLSTACK DEVELOPER

✉ itay74121@gmail.com

📍 Rosh Ha'Ayin, Israel

☎ +972545817273

Profile

Resourceful backend-leaning full-stack developer with 2 years of hands-on experience building, maintaining, and automating ERP workflows using niche legacy systems. Currently pivoting into modern web development with a focus on JavaScript, Node.js, and React. Strong ability to adapt, learn fast, and deliver clean, maintainable code. Building projects that solve real-world problems while mastering current web stacks.

Employment History

Full-Stack Developer, Matrix IT.

May 2023 — Present

- **Worked** on a legacy ERP system using InterSystems Cache, maintaining and extending business logic that connected data from dozens of global sources.
- **Handled** backend-heavy tasks like mapping and syncing Cache DB with SQL tables, organizing and cleaning data before presenting it on custom-built internal web screens.
- **Created** custom logging tools to help devs navigate and debug decades-old code, making it easier to understand system flow and variable states during runtime.
- **Regularly** reverse-engineered old logic based on user requests (e.g., removing pop-up messages, changing email recipients), often without documentation—requiring deep digging through 30-year-old code and user process observations.
- **Collaborated** with teammates on shared screens where tasks could conflict, requiring strong coordination, patience, and workarounds to avoid breaking live systems.

Professor theaching Assistant , Ariel University

October 2022 — October 2023

- **Instructed** first-year students in Object-Oriented Programming using Python and Java, providing a strong foundation in programming principles and best practices.
- **Guided** students through multithreading and I/O operations in Java and Python, equipping them with the skills to write efficient and concurrent programs.

Education

B.Sc Computer Science and Mathematics, Ariel University, Ariel

October 2019 — October 2022

- Cyber Oriented Program
- Deep Learning (DL) and Machine learning (ML) courses
- Graduation Project – Built and compared GNN and other DL and ML models for encrypted traffic classification.

Personal Projects

Multiple Automation Projects

Extensive experience in developing automation solutions using Python, Node.js, and Playwright. Proficient in integrating computer vision, natural language processing (NLP), and relevance-based classification systems to deliver efficient and innovative solutions.

Skills

Languages - JavaScript, SQL, Cache ObjectScript

Frontend - React, HTML, CSS

Backend - Node.js (learning), REST APIs (exposure)

Databases - MySQL, PostgreSQL

Tools - Git, GitHub, Linux, Docker (learning)
